

FINAL EXAM

MF145 Basic Fluid Power

NAME: _____

1. Equal pressure on both sides of a standard cylinder will _____.
 - a. do nothing
 - b. cause the cylinder to extend
 - c. cause the cylinder to retract
 - d. cause piston leakage

2. Pressure gauge units are typically psi and _____.
 - a. Pa
 - b. kPa
 - c. 100xkPa
 - d. 1000xkPa

3. What is the formula for calculating the force created by hydraulic pressure?
 - a. $F = P/A$
 - b. $F = A/P$
 - c. $F = A \times P$
 - d. $F = 3.1416(R^2)/4 \times P$

4. Why do hydraulic systems react more responsively than pneumatic systems?
 - a. They don't – both are considered fluids and react the same.
 - b. Oil is incompressible.
 - c. Air is incompressible.
 - d. Oil is heavier than air.

5. For a 4/3 DCV, the 4 represents "4-way". That means _____.
 - a. There are four spool positions
 - b. The outside casing is a #4 size
 - c. There are four active ports
 - d. There are four spool locations

6. Which of these is a flow rate?
 - a. Gallons/Foot
 - b. PSI
 - c. Inches/second
 - d. Liters/minute

7. What does the following symbol represent?

- a. Pneumatic pump
- b. Flow meter
- c. Hydraulic pump
- d. Hydraulic motor

8. For what reason might you select a unidirectional hydraulic motor?

- a. Cost
- b. Flexibility
- c. Size limitation
- d. Flow speed

9. Inline, bent axis and radial are all types of _____.

- a. Gear motors
- b. Flow meters
- c. DCV's
- d. Piston motors

10. Calculate the extending force of the following cylinder.

Pressure = 300 psi

$\pi = 3.1416$

Piston diameter = 3"

Area = $3.1416 D^2/4 = 3.1416 r^2$

Rod diameter = 0.5"

Rod length = 4"

- a. 3131 lb
- b. 2453 lb
- c. 2121 lb
- d. 59 lb

11. What will happen in the apparatus shown here?

- a. It will remain in balance.
- b. The 50 lb weight will sink.
- c. The 600 lb weight will sink.
- d. Both weights will sink.

12. From highest to lowest, put the pressure gauge readings in order:

- a. CBA
- b. BAC
- c. ABC
- d. They will all be the same.

13. During operation, the highest pressure in a hydraulic system occurs at _____.
- The input of the actuator
 - The reservoir
 - The DCV
 - The pump's outlet

14. What will happen when this DCV's handle is pulled out?
- Nothing
 - Cylinder extends
 - Cylinder retracts
 - Port A is blocked

15. Which statement is true?
- $P_{abs} = P_{gauge} + P_{atm}$
 - $P_{abs} = P_{gauge} - P_{atm}$
 - $P_{atm} = P_{gauge} - P_{abs}$
 - $P_{atm} = P_{abs} + P_{gauge}$

16. The minimum pressure needed to open a relief valve is called:
- Feathering point
 - Relief point
 - Cracking pressure
 - Drainage pressure

17. This valve diagram indicates that _____.
- It is normally open
 - It is normally closed
 - It is not adjustable
 - Its movable member is a poppet

18. During normal operation, a relief valve will limit system pressure whenever _____.
- The DCV is in a blocked position
 - The cylinder becomes fully extended
 - The actuator is stalled by an excessive load
 - All of these.

19. How can you prevent 'losing the prime of a pump'?
- Lower the cracking pressure of the relief valve.
 - Install a check valve in the suction line.
 - Use a piston pump.
 - Increase the diameter of the suction line.

20. Which type of hydraulic check valve does not have a spring?
- Ball
 - Poppet
 - Swing
 - None of these.
21. A flow control valve combines a _____ and a _____ in one body. (Pick 2)
- Needle valve
 - Relief valve
 - Sequence valve
 - Check valve
22. Which method prevents 'runaway' with an aiding load?
- Meter-in
 - Meter-out
 - Both a & b are at risk.
 - Both a & b work equally well.
23. In order to limit damage to a delicate part while it is being clamped by a cylinder, what type of valve could you put in line with the cap end?
- Flow control valve
 - Integral check valve
 - Check valve
 - Pressure reducing valve
24. Closed center, tandem center, free float center & open center are types of _____.
- Sequence valves
 - PRVs
 - DCV spools
 - Check valves
25. A meter-in flow control valve controls the speed of an actuator by _____.
- Restricting the flow to the actuator
 - Restricting the flow from the actuator
 - Applying back pressure to the actuator
 - Diverting flow to the reservoir
26. The primary purpose of a relief valve is to _____.
- Hold pump prime
 - Control flow
 - Allow hydraulic motors to coast to a stop
 - Limit system pressure

27. The rod side area that produces the pull force on a double-acting cylinder is called the _____ area.

- a. Annular
- b. Cap
- c. Rod
- d. Blind

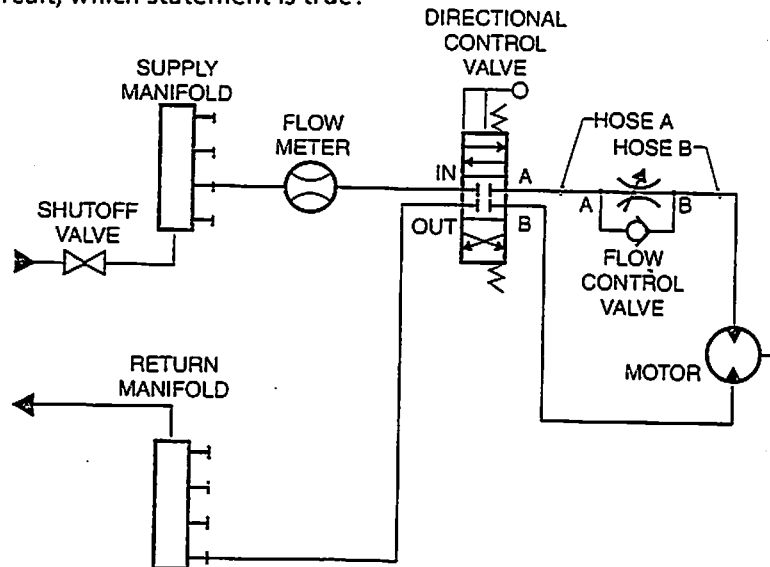

28. Pressure is created by the _____.

- a. Pump
- b. Reservoir
- c. Flow meter
- d. Resistance to flow

29. As oil is pumped through a hydraulic system, it progressively _____.

- a. Drops in pressure
- b. Drops in flow rate
- c. Increases in pressure
- d. Increases in flow rate

30. In this hydraulic circuit, which statement is true?

- a. The motor will stop when the DCV is pulled out.
- b. The motor speed is controllable in both directions.
- c. Motor speed is controlled when the DCV is pulled out.
- d. The motor always runs at full speed when the DCV is pulled out.
